

## TIMBER PROCESSING ADVISORY SERVICE

Windsor is a leading supplier of timber drying kilns and associated equipment with over 500 drying systems commissioned since the early 1980's. Over 80% of all plantation softwood dried in Australia and New Zealand is processed in a Windsor systems.

30 years of experience in this field, plus an ongoing close relationship with CSIRO (Australia) and Ensis (Rotorua, New Zealand), has provided the company with a unique understanding of drying technology and many other associated aspects of sawmill procedures and lumber management.

It is largely due to this background that Windsor is able to offer a professional timber processing advisory service to the industry.

Defect Analysis

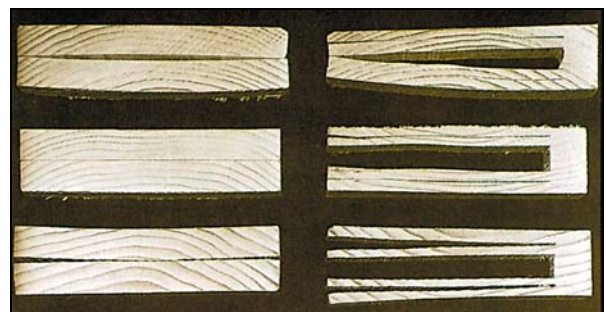

The importance of careful stack preparation

### How Can You Improve Productivity?

Every case is different, but areas worthy of assessment might include:

- Yield.
- Production flow and ergonomics.
- Stock control and yard management.
- Quality control.
- Plant suitability and application.
- Maintenance programmes.
- Kiln drying capacity and schedules.
- Control systems and records.
- Management of degraded product.
- Labour utilisation.

Control of drying stresses

Windsor offers a hands-on approach focussing on practical solutions with measurable benefits. We will develop a programme of assessment and training specifically designed for your operation, followed by on-going support and advice as the plan is implemented.

Secure your company's future by improving the efficiency of your operation.
